

FUNCTION ASSIGNMENT

Q.1 - Write a function which take a list of numbers and return a list only with even numbers.

Q.2 - Write a function which takes 3 argument number, low , high. Return whether the given number is between the range or not. low means: starting of range. high means: end of range

Q.3 - Write a function which takes a string and print number of uppercase letters and number of lower case letters in that string. (hint: return an object)

Q.4 - Write a function which take an array and return a new array of unique numbers.

example - `a = [1,2,3,3,1,1,4,5]` `output = [1,2,3,4,5]` (hint: to check if a number is in an array is `=>` `number in array =>` it will return true if number is in array. Example , if you do `console.log(1 in a)` -> it will return true because 1 is in array a);
